

VENT PURE "T"

large pipe odor control

The GENERAL CARBON VENT PURE "T" answers the need for the control of emissions from larger vent pipes. These filters are passive units that treat gasses from atmospheric vents in commercial and industrial facilities. They are made to easily slip over standard iron pipe sizes (PVC pipe too) or can be supplied with 150# flanged connections. Each filter contains 5 lbs to 12 lbs of activated carbon to remove problem odors. To install a VENT PURE "T" you simply slide it over the offending pipe. When seated properly, the exhaust vapors are directed through a media bed that removes the odors.

The VENT PURE "T" is designed to be refillable. Activated carbon has a limited capacity for chemicals and when this capacity is reached the carbon must be replaced. When you notice the smell has returned, the threaded plug on the top is removed and the spent media is dumped out and new media is added. You can expect to replace the media in a VENT PURE "T" every 6 months to one year depending on the amount of vapors it treats. The VENT PURE "T" comes in 3 inch, 4 inch, 6 inch and 8 inch sizes standard. We can make special equipment for proprietary applications. Please call General Carbon Corporation to discuss your application needs.

Model	Inlet size	Outlet size	Amt of Carbon	Flange optional
VentPure "T"-3	3" Slip	6"	8 lbs	Yes
VentPure "T"-4	4" Slip	6"	9 lbs	Yes
VentPure "T"-6	6" Slip	6"	10 lbs	Yes
VentPure "T"-8	8" Slip	8"	20 lbs	Yes
